DACH

IT'S TIME TO STEP FORWARD

Dach is recognized as a leading manufacturer of low-speed personal transportation vehicles, with years of experience and outstanding expertise in design, research and development, production, and service. Over the years, we have refined our skills, particularly in automotive components, structural design, and electric powertrains. At present, traditional golf cart brands have reached a limit in functionality and comfort, unable to meet the growing demand for versatile, high-performance community vehicles.

Recognizing this gap in the market, four years ago we began combining our passenger vehicle design expertise with golf cart manufacturing technology. We established a new manufacturing and R&D center focused on innovation in golf carts for local short-distance commuting, recreational use, and community transportation. Today, we have the most experienced workers, skilled engineers, and talented designers, along with 2 manufacturing facilities equipped with the latest and most advanced production equipment.

As demand for high-performance, comfortable community vehicles continues to grow, traditional golf carts and local mobility solutions are no longer sufficient to meet the changing needs of the market. We understand that it is time for a revolution—a new generation of community vehicles that will redefine functionality, comfort, and sustainability. Our mission is to bring these innovative golf carts to life, providing solutions to the diverse transportation needs of modern society. The future of mobility is here, and Dach is proud to lead the way forward.
